

ABSTRACT

~~The present invention provides an~~ An assembly of a tubular element and at least one panel, particularly for use in outdoor playground installations, is provided. The assembly comprises at least one pair of fixing elements suitable for being mounted on the tubular element. The pair of fixing elements and the panel are configured in such a manner as to enable the panel to be held in place between the fixing elements, the fixing elements being disposed on either side of the plane of the panel. This configuration results in an improved assembly that is easy to implement and that presents reliable strength characteristics, thus ensuring a high degree of safety in use.
